ENVIRONMENT JOBS

Aquatic/Wildlife Biologist:

Working as an Aquatic/Wildlife Biologist, you may have the opportunity to work on some or all of the following activities:

- Fish and aquatic ecosystem assessment and research, including creel surveys, index netting, biological sampling, data entry and basic analyses.
- Wildlife population and wildlife habitat assessment, including both aerial and ground surveys; species identification and mapping; as well as sampling and assessment for a variety of wildlife.
- Operate boats, outdoor motors, ATVs and other specialized equipment.

Assistant Fish Culture Technician:

Working as an Assistant Fish Culture Technician, you may have the opportunity to work on some or all of the following activities:

- Assist fish culture station staff by performing technical duties related to the culture of fish and the operation and maintenance of the station, such as tank cleaning, disinfection and equipment maintenance (e.g. piping, valves, etc.).
- Provide customer service assistance by providing tours of the facility to visitors and responding to questions on the fish culture program.
- Assist staff by performing daily fish culture activities, including feeding, inventories, picking of losses, fish marking, anaesthetizing, thinning, disease sampling, etc.

Assistant Fisheries Technician:

Working as an Assistant Fisheries Technician, you may have the opportunity to work on some or all of the following activities:

- Field work, which may include assisting Great Lakes staff and technicians with:
 - Conducting surveys, data collection, mapping, inspections, interviews and day-to-day assigned activities.
 - Operating equipment related to fish stocking (e.g. pumps; gill, seine, and fyke nets; limnological sampling; YSI/Hydro lab, sonars; weight scales; lab equipment).
- Perform research, conduct analysis and evaluate environmental information and data to assist in producing reports.
- Operate boats, motors, trucks, ATVs and other specialized equipment.

Assistant Forest Technician:

Working as an Assistant Forest Technician, you may have the opportunity to work on some or all of the following activities:

- Assist staff by performing forest-related field, lab and office work, such as:
 - Identifying tree and other plant species; determining soil types; assessing tree and forest health; tree breeding; orchard or genetic testing; collecting, processing and testing tree seeds; establishing studies and trials; and collecting and compiling data.
- Use technology such as data loggers, Global Positioning System (GPS) units, rangefinders and digital cameras to perform your work.

Assistant Resource Management Technician:

Working as an Assistant Resource Management Technician, you may have the opportunity to work on some or all of the following activities:

- Aid staff with information management of Crown land through the distribution of land use permits, work permits, leases, etc., and by conducting site visits.
- Provide assistance to the Fish and Wildlife program by conducting research and fieldwork to assemble and draft information, including writing reports on fish and wildlife resources.
- Assist the Forestry program by conducting field work involved with Silvicultural Effectiveness Monitoring and assisting with forest compliance inspections.
- Provide administrative support (e.g. organizing files and publications) and assist with outreach activities (e.g. speaking with the public/doing presentations to educate/generate awareness).

Assistant Water Resources Technician:

Working within a team, you may have the opportunity to work on some or all of the following activities:

- Assist with the review, improvement, operation and maintenance of the analytical procedures, models and analytical techniques used by the Surface Water Monitoring Centre.
- Assist with advising on hydrometeorological issues such as flooding, climate change and drought, as well as contribute to other pertinent water management projects initiated within the broader waters program.
- Assist with researching and evaluating new hydrological and climatic technologies and methods, as well as preparing/reviewing feasibility studies.
- Assist with spatial analysis and development of maps and other hydrometeorological products using programs such as ArcGIS.

Climate Change Research Assistant:

Working within a team, you may have the opportunity to work on some or all of the following activities:

- Assist staff with field sampling of peatlands, including collecting peat cores, downloading and quality assuring weather station, permafrost, and peat soil temperature and moisture data.
- Work in a laboratory setting using traditional (e.g. culturing, microscopy) and molecular (e.g. PCR, RFLP) techniques in the study of fungal disease pathogens of forest trees.
- Work with gas chromatography or other analytical methods.
- Perform field analyses, sample preparation and chemical laboratory analyses.

Environmental Assistant:

Working within a team, you may have the opportunity to work on some or all of the following activities:

- Perform research, conduct analysis and evaluate environmental information and data to produce reports.
- Respond to public inquiries, complaints and provide support for outreach and education initiatives.
- Field work which may include assisting district staff with field and technical inspections and investigations, monitoring and abatement to ensure compliance of environmental laws.

Fish & Wildlife Assistant:

Working as a Fish & Wildlife Assistant, you may have the opportunity to work on some or all of the following activities:

- Assist staff by performing field work to complete fish and wildlife population and habitat assessments including aerial and ground surveys, flora and fauna species identification, and assisting with project planning, support and implementation.
- Assist staff by performing research and data compilation, including assembling information from hardcopy and digital sources, performing data entry, and preparing a variety of documents.
- Provide customer service assistance by responding to clients, staff and the public to address their needs.

Geographic Information Systems (GIS) Assistant:

Working within a team, you may have the opportunity to work on some or all of the following activities:

- Assist staff with data collection, trend analysis and simple map preparation using Geographic Information System (GIS) software.
- Collect, review, verify and enter information/data into databases/forms, and perform analysis and evaluation of information and data to produce reports.
- Provide customer service assistance by responding to public and/or internal inquiries.
- Field work which may include technical investigations, inspections and site visits.
- Office work which may include graphic design for image reorganization/optimization and printing support.

Wetland Information Management Assistant:

Working as a Wetland Information Management Assistant, you may have the opportunity to work on some or all of the following activities:

- Update technical documents, reports, maps and web links, and assist with the coordination of wetland evaluations.
- Attend information management training sessions and surveys.
- Assist with proactive and reactive information management training material.
- Support staff in providing assistance with administrative and clerical services.
